Software Update Available for TRE, Version 2.9 Build45

On February 2nd, 2010, Broadcast Electronics released new [TRE Upgrade Kit Software Version 2.9 B045](#).

The software update is available, for registered users, from the Broadcast Electronics Technical Services website in the Registered User Section at: http://www.bdcast.com/support/registered_user.php

Instructions are included in the downloadable zip file. The included *Read ME!_v4.pdf* will provide upgrade assistance.

Please contact the Technical Services department by phone at 217.224.4700 or e-mail service@bdcast.com if assistance is required.

Summary of features and fixes for 2.9 B045:

1. Beta - Licensing for TRECast application.
2. Beta - Support for RT+ iTunes Tagging with the Innovonics 730 encoder.
3. Support added for AudioVAULT Deck View input.
4. Listener Driven Radio licensing now includes a unique StationID which is tied to the license. This unique ID should be used in the event that the station ID used by LDR is different than the call sign. The station ID can only be modified by BE.
5. TRE now posts a header to the Listener Driven Radio server to aid in load balancing.
6. Bug Fix to address how TRE mishandled automation schedules when the schedule start time was just before the top of the hour.
7. Bug Fix where the default URL for Listener Driven Radio has been updated in accordance with directions from LDR.

The Radio Experience (TRE) Message Manager is a suite of software and services designed to easily feed station branding, program information, traffic and weather... even content-associated text ads and promotions. TRE Message Manager's integrated feature set is straightforward and easy to implement. Less time is spent on system configuration and more on creating compelling, revenue enhancing data.

Messagecasting tools are designed to help you create, schedule and format compelling messaging content. New tools include Revenue Center, offering ways to track and generate Messagecasting revenue, and TRE Producer which allows content creators to attach program-specific messages to original programming.

Thank you for choosing Broadcast Electronics!
